

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
Investigation confirmed this alert is a legitimate phishing attempt. The email contained a password-protected executable attachment (bfsvc.exe), and the password was provided in the email, which is a common technique used to bypass security controls. The attachment's SHA-256 hash was verified as malicious using VirusTotal. Additional indicators include grammatical errors in the message body and a suspicious sender domain and IP address. Due to the confirmed malicious file and high risk of system compromise, this ticket has been escalated to Level 2 SOC for further investigation and response.

Additional information

Known malicious file hash:
